The Ark of the Covenant Found in Egypt!

“A scientific revolution for the benefit of all mankind”

Director of Science – Supreme Council of Antiquities

After years of research, followed by extensive fieldwork and site surveys using the latest technology, the Ark of the Covenant has been found in a secret chamber underneath the Great Pyramid of Egypt; a twin subterranean chamber connected by the southern passage.

Dr Warner, a consultant to the Egyptian Government and a special adviser to the Scan Pyramids Mission (a consortium of international scientists using muon radiation to scan deep inside the pyramids) pinpointed the exact location using triangulated data contained within the texts of the three Abrahamic religions – Judaism, Christianity & Islam. With supporting data from the cuneiform clay tablets of Mesopotamia, Warner used etymology to prove his hypothesis that “Mount Sinai”, the “Mountain of Israel” and the Quran's “Mountain of Light” were all one-and-the-same mountain...the Great Pyramid of Egypt. Furthermore, he used quantum theory to prove that the prophecies of the three religions were rooted in science. Experimental scientists, such as Stephen A. Schwartz, have published scientific papers on “non-local consciousness” or “channeling” which Warner says is “prophecy by another name”.

Dr Warner believes “the discovery will bring peace to the Middle East” and wants the last stone block removed this year to allow for the Ark to be displayed as the “Jewel of the Nile” at the opening of the new Grand Egyptian Museum; right next to the Pyramids site in Giza.
